

Package Contents:

Socket 4 x 1

green light 15CM x 1

Warm light headlight 30CM x 3

Color light strip A warm light (3 sections) x 1

Color light strip B warm light (1 section) x 1

Connecting cable 30CM x 1

Battery box AA (USB port) x 1

Remote control + remote control module x 1

USB port 50CM x 1

Some building blocks

Notes (the pictures in this paragraph are for demonstration purposes only and are not the parts of this set) :

Wiring above and below the board

Wires can be run between boards or underneath boards , but they must be placed correctly between the studs.

Be extremely careful when inserting the wire plug into the outlet; the plug only goes in one way. With the plug facing up, look for the soldered "=" symbol on the left side of the port. The side of the plug with the exposed wires should be facing the soldered "=" symbol as you insert it into the port. If the plug does not fit easily into the port, do not force it.

Inserting the socket incorrectly may cause the pins inside the port to bend or may cause the socket to overheat when connected.

When installing the light pellets on the building blocks, make sure they are properly positioned (with the yellow LED assembly exposed). You can place them directly on top of the building block studs or in between.

Insert the battery into the battery compartment

The specifications of several battery boxes are different, please pay attention to the positive and negative poles of the batteries.

AA battery box Correct battery installation

**Button battery box (flat) battery
correct installation method**

**Button battery box (round)
battery correct installation**

**2 batteries
positive side up**

Installation Instructions

Take out the AA battery box and correctly install 3 AA batteries (new batteries are recommended)

Remove the USB power cable and insert it into the battery box

Take out the remote control module and plug the USB power cable into the module **IN**
socket (single socket side)

Take a 30cm warm light headlight and insert it into **any OUT socket of the module.**

Take out the remote control and pull out the insulating gasket below

LYBMTWF

Turn on **the battery box switch** , click the remote control **ON button** , and test that the light is on normally.

LYBMTWF

LYBMTWF

Take out the building

LYBMTWF

Dismantling the red telephone booth

Remove the parts indicated by arrows one by one

LYBMTWF

LYBMTWF

Continue to decompose the parts shown in the figure one by one

LYBMTWF

LYBMTWF

Take 1 30cm warm light headlight pellet , 1 1x2 transparent piece

the light particle with **the luminous side facing downward** in the center of the transparent piece, and fit the wire to the arc.

LYBMTWF

Install 1x2 transparent parts to fix the light particles

Pass the wire through the gap as shown in the figure

LYBMTWF

Restore transparent parts

Restore gray parts

Go to the back side , fit the wire to the angle, and pass it over the raised part.

Restore the green parts and fix the wires

Restore the parts as a whole, with the wires on the back (note the direction of the telephone booth)

Go to the back of the phone booth

LYBMTWF

Remove the parts indicated by arrows one by one

LYBMTWF

LYBMTWF

Fit the wire to the angle and pass through the gaps between the raised particles.

LYBMTWF

The effect after sorting is as follows

LYBMTWF

Restore parts and fix wires

LYBMTWF

Continue to pass the wire along the part angle

LYBMTWF

Restore parts and fix wires

Remove the parts indicated by the arrows.

Pass the wire along the gaps between the raised particles

LYBMTWF

Restore parts and fix wires

Take out **the light strip A** and prepare to install it on the roof

LYBMTWF

Tear off the adhesive backing of the headlight strip

Paste the light strip to the position shown in the figure, and the remaining light strip is on the top (pay attention to **the direction of the roof** , refer to the position shown by **the blue circle**)

LYBMTWF

Continue to stick the remaining light strips to the edge of the roof, with **the tail wire at the bottom.**

Fit the wires between the light strips to the parts

Restore the roof, the tail wire is on the back of the phone booth

Remove the parts indicated by the arrows.

Pass the tail wire downward around the raised particles.

Restore parts and fix tail wires

Take out the light strip B

Place the phone booth on its side, pay attention to the direction, **the tail line is on the left**

Paste the light strip to the position shown in the figure

Continue to stick the light strips to the edge of the base.

LYBMTWF

Turn the phone booth back to the original position.

LYBMTWF

Remove the parts indicated by the arrows.

Pull the tail of the light strip along the gap between the raised particles to the top

Restore parts and fix tail wires

the telephone booth aside

Take out the base and remove the parts indicated by the arrows one by one.

LYBMTWF

Decompose the flowers as follows

Take 1 15cm green light pellet, 2 hollow transparent round

Bend the lamp 90° with the light-emitting side facing outwards

Put the lamp plug through the small

LYBMTWF

hole in the hollow circle .

Tighten the wire so that the light-emitting side of the lamp faces outward and fits onto the protrusion.

LYBMTWF

Install the hollow transparent circle to fix the light particles

Install the lamp to the center of the part, **paying attention to the direction of the part**

LYBMTWF

Continue to pass the wire through the gap in the part.

From below, the effect is as follows

LYBMTWF

Restore the part, with the wire on the left

Restore the flowers above

Remove the white card

Decompose the brand as follows, take 1 30cm warm **light headlight pellet**

Place the light pellet with **the luminous side facing downwards** and fit it to the position shown in the picture. **Pay attention to the direction of the white card.**

LYBMTWF

Hold the lamp and place the wire on the back of the white card through the center.

Restore parts and fix wires

LYBMTWF

Route the wires around the grey part

LYBMTWF

Restore the white card, the wire is on the left

Pass the wire through the gap in the fence to the back

Tighten the wires from the back

Remove the parts indicated by the arrows.

Pass the wire through the gap under the fence

With the help of a lifter , pass the wire through the gaps between the raised particles.

LYBMTWF

Restore parts and fix wires

Continue to fit the wire to the part angle and pass through the gaps between the raised particles.

The effect after sorting is as follows

Restore parts and fix wires

Turn to the side and remove the parts indicated by the arrow

Fit the wire to the edge of the part through

Restore parts and fix wires

Remove the parts indicated by the arrows.

Fit the wire to the edge of the part through

Restore parts and fix wires

Bring the two wires together and fit them along the edge of the part.

Restore parts and fix wires

LYBMTWF

Adjust the position of the light particles so that they can illuminate the bottom

Take a 30cm warm light headlight and prepare to install it on the street light

Decompose the street lights one by one

LYBMITWF

the lamp wires by 1 gap

Put the light pellets with **the luminous side facing upwards** and put them on the orange parts.

LYBMTWF

Hi Brick

Tighten the wires appropriately to fix the lamp particles

Restore transparent cover

Route the wires through the bracket

Separate a gap under the lamp post

Pass the wire through the gap

LYBMTWF

Restore the gap and fix the wire

Restore the street light, with the wire on the left, and pay attention to the direction of the street light

Restore black parts

Take a 4-seat and a 30cm connecting wire, and insert the connecting wire into the 4-seat **side socket**

Plug and socket connection method

Align the "=" on the plug with the "=" side on the receptacle

The "=" on the plug
can clearly see one
side of the line

There are two silver
dots next to the "="
socket on the socket

equal sign equal sign

Insert all 3 wires into the 4 sockets

Insert the cable into **any OUT jack** of the module

Turn on the power and test that the light is on normally

After the test, turn off the power, unplug the connection cable, and **leave the module on the power supply.**

Tear off the adhesive backing of the 4 seats

LYBMTWF

Paste the 4 seats to the positions shown in the figure

LYBMTWF

Pass the connecting line along the gaps between the raised particles

LYBMTWF

Restore the gray tablet and fix the connection line

Twist the excess wires together and stuff them into the gap.

LYBMTWF

Use a tool to pry open a gap in the part as shown in the picture.

LYBMTWF

Pull the connecting line along the gap to the back

LYBMTWF

Restore the gap and fix the connection line

LYBMTWF

Go to the back of the base

Remove the left fence

Remove the plate indicated by the arrow.

Fit the connecting line to the parts and pass along the angle

LYBMTWF

Restore parts and fix connecting wires

Restoring the Phone Booth

Insert the upper right wire into the module A socket (marked near the socket)

Insert the upper left wire into the module B socket

Turn on the power, test that the light is on normally, and turn off the power after the test is completed.

Insert the lower left wire into the module C socket

Plug **the black cable** into the module **D** socket

LYBMTWF

Turn on the power, test that the light is on normally, and turn off the power after the test is completed.

Insert the module into the gap shown in the figure

LYBMTWF

Put the extra wires into the gap (except USB wires)

Restore Fence

Go to the side

LYBMTWF

Remove the gray plate indicated by the arrow.

LYBMITWF

Use the tablet to fix the USB cable

At this point, the installation of this set of lighting is complete. Turn on the power and enjoy it!

If not used for a long time, please turn off the battery box.

ON: All branches are fully open
OFF: All branches are closed

A: Open/close A road
B: open/close B road
C: open/close C road
D: open/close D road

FS: Turn on flashing mode
for the last opened road
BLN: Turn on breathing mode
for the last opened road

↑ : increase flashing/breathing rate
↓ : Reduce flashing/breathing rate
+: increase brightness
-: Decrease brightness

If you want the light to stay on, plug the USB port into a USB power source.
