

Socket 4x 1

Colored light strip green light (1 section)x 2

Colored light strip warm light (1 section)x 1

Usb power Cable &AA battery case

Precautions (The content of the pictures appearing in this paragraph is for demonstration and not part of this set):

Wire above and below the building blocks

The wires can be arranged between the boards and the boards or underneath the boards, but they need to be placed correctly between the studs

Install the light particles on the building blocks

Please make sure they are placed correctly (yellow LED components exposed). You can place them directly on top of the block piece studs or in between.

Connect the wire to the light bar

Be extra careful when plugging the wire into the strip connector, the plug can only be inserted in one way. Place the light bar with the illuminated side facing up, making sure the side of the plug exposed wire is facing down. If the plug is not easy to insert into the interface, do not force it in. so as not to damage the connector and plug.

The correct connection method of the light bar

Insert the battery into the battery compartment

Several battery compartments have different specifications, please pay attention to the positive and negative poles of the battery.

AA battery box Correct battery installation

Button battery box (flat) battery correct installation method

Button battery box (round) battery correct installation

Connect them together, turn on the power, and the test particles light up normally

Plug and socket connection method

Align the "=" on the plug with the "=" side on the receptacle

The "=" on the plug
can clearly see one
side of the line

There are two silver
dots next to the "="
socket on the socket

equal sign equal sign

All our connections between plug and socket are all the same as shown above. So for any such structure with plug and socket, please pay attention to the golden wire of the plug and the golden needle of the socket, they must be touched together.

The connection method between the USB Power Cord and Expansion Boards is as follows:

The USB Power Cord can be powered by phone chargers, power banks, etc.

USB connectors to connect devices

When we test "Strip Lights - Warm White", take out the bag labeled "Strip Lights - Warm White". Take out one of the lights and connect it to the outlet. Turn on the power and the light will turn on normally as shown in the figure below.

Test each lamp according to this method. It is important to note that after the test, the lamp must be put back in the corresponding bag to avoid confusion of types.

If any component is not working properly, please contact us immediately.

The installation begins

Remove the two green light strips and peel off the adhesive backing

Take out another green light strip, tear off the adhesive backing and stick it on the inner wall as shown

Take out the warm whitelight strip and tear off the adhesive backing

Take out the 4-seat shield and the USB power cable and connect it

Insert all three wires into the shield

Take out the bricks underneath and thread through the gaps in the bricks

Many of the threads are hidden in the inner wall, and the installation is complete
